NEW: OIL COOLERS FOR PASSENGER CARS

18 PRODUCTS COVERING OVER 81 MILLION VEHICLES

OIL COOLERS FOR PASSENGER CARS

Engine parts subject to high stresses, such as the pistons, don't just use the engine oil for lubrication and as a sealant, but also for cooling purposes. The oil circulates through a closed circuit from the oil pan to the oil pump and on to the moving parts of the engine, before returning to the oil pan. An oil cooler integrated into the oil circuit provides additional cooling. Nowadays, many oil coolers have a plate-based structure, with several plates lying on top of one another and forming separate channels. These channels alternate between ones filled with oil and ones filled with coolant agent. To improve the heat transfer, the channels may have structures to increase the surface area.

Motorservice has expanded its product range to include oil coolers for passenger cars under the Pierburg premium brand. These are available as an engine oil cooler and as a transmission oil cooler. And better still: the matching gaskets are also included.

These oil coolers for passenger cars under the Pierburg brand also supplement the existing BF range for utility vehicles.

N

The 18 products boast OE quality and can already offer repair shops a potential market of over 81 million vehicles across the globe. What's more, the range of products is constantly being expanded.

C NOTE

Abrasion or chips may contaminate or even block oil coolers. Dirt particles in the fine lamellae cannot be completely removed by cleaning alone.

If an old oil cooler is reused, these dirt particles may come loose, enter the oil circuit and cause engine damage or premature wear. Therefore, when performing engine reconditioning work always replace the oil cooler instead of cleaning it.

Leaks in the oil system may cause engine damage as well as environmental damage.

As a result, when performing maintenance work don't just look out for leaking oil coolers, also check that the lines conveying the oil are in perfect condition.
