

Pierburg Original Spare Parts for Asian vehicles

SUITABLE FOR

NISSAN

HYUNDAI HONDA MAZDA

MITSUBISHI SSANGYONG

SUBARU **DAEWOO KIA** INFINITI

LEXUS ACURA ISUZU SUZUKI

DAIHATSU TOYOTA

Whether conventional or alternative engines, what is needed are specialists who can find optimal solutions to this seeming contradiction. With a tradition stretching back over a hundred years, Pierburg is a unique brand that stands for reliable partnership and future-oriented technology. As a development partner of the automotive industry, Pierburg researches engine technology for the future, and develops innovative solutions that are ready for mass production. Whether EGR systems, valves, actuators, or pumps – Pierburg is a synonym for competency and innovation in the area of reduced emissions and consumption. Our partners trust in the know-how of our personnel and our passion for developing and manufacturing mechatronic components, modules, and systems for engines. We meet every challenge and, through creativity and innovative power, we enable the drive of tomorrow.

We are pioneers in this area and can look back upon a long history of success in the development and manufacturing of innovative system solutions in the area of engines. As far back as 1928, Pierburg was the market leader in carburetor production for vehicle and engine manufacturers. And with the invention of the secondary air system, we once again led the way. Today, Pierburg is the first point of contact when it comes to reducing the fuel consumption and emissions of conventional engines. The variety of high-quality components and systems is convincing all across the board. And for alternative drives, Pierburg is also excellently positioned. For instance, components such as electric coolant pumps, valves, and actuators are important components for the thermomanagement of electrical and hybrid engines.

History

1909

Bernhard Pierburg founds the steel trading company Gebr. Pierburg OHG in Berlin

1928

The first **Solex carburetor** of Gebr. Pierburg OHG is used in the motor of the Hanomag P 2/10

1960

In Neuss, Pierburg constructs **Europe's most modern R&D center** for the reduction of harmful emissions

1970

Development of the first **exhaust gas recirculation (EGR)** valve by Pierburg

pump produced in Hartha

System components and service

Motorservice Group

Quality and service from a single source

The Motorservice Group is the sales organisation for the worldwide aftermarket activities of Rheinmetall Automotive. It is a leading supplier of engine components for the independent aftermarket. With the premium brands Kolbenschmidt, Pierburg, TRW Engine Components and the BF brand, Motorservice offers its customers a wide and comprehensive range of top quality products from a single source. As a problem solver for trade and repair shops, the corporation also offers an extensive service package. Motorservice customers benefit from the combined technical know-how of a large international automotive supplier.

Pierburg –

the premium brand around the engine.

The Pierburg product range includes components, modules and systems for fuel supply, air supply, emission control and vacuum generation, as well as mechanical and electrical water pumps.

Pierburg products stand for:

low pollutant emission, good fuel consumption, reliability, quality and safety and are used in a variety of systems all around the engine.

Fuel supply

Everything for the "circulation" in the vehicle

From fuel pumps, pump modules and sender units, from system-pressure regulators, non-return valves and regeneration valves, through to canister purge valves: Motorservice offers a wide range of components that are indispensable in the fuel system – in proven Pierburg quality.

Air supply

For increased efficiency and more driving enjoyment

Throttle bodies, intake manifolds and suction pipe modules for controlling the optimal air quantity – these products with sophisticated technology guarantee optimal performance, driving comfort and the correct torque, with the lowest possible fuel consumption.

Water pumps

Demand-based cooling for a long engine life

The electrical coolant pumps from Pierburg guarantee demand-based engine cooling, reduce the power requirements and cut frictional losses, fuel consumption and pollutant emissions. Pierburg also produces over 7 million mechanical water pumps as original equipment each year. The pumps are characterised by high-quality components.

Oil pumps

Perfect oil supply

Rheinmetall Automotive develops and supplies oil pumps to all leading engine manufacturers and owns numerous patents. Building on this know-how, Motorservice offers pumps for a multitude of passenger car and utility vehicle applications. Make the most of this experience at a fair cost-benefit ratio.

Vacuum pumps

Reliable vacuum for a large number of control elements

The precision pumps from Pierburg produce the required vacuum for the brake booster, controlling the functions of the central locking system, air conditioning, automatic transmission unit, emission control systems and other control elements.

System components and service

Exhaust gas recirculation (EGR)

Emissions reduced by 50% before the catalytic converter is even reached

There's a reason why Pierburg is represented as the OEM in a large number of modern vehicles with EGR valves and EGR coolers. The corrosion and temperature-resistant materials used in the Pierburg products guarantee lasting function under the harshest conditions, e.g. aggressive exhaust gas condensate, temperatures up to 700° and pressures up to 3 bar.

Secondary air system

Efficient emission control during the cold start phase

Pierburg is the market leader in Europe for secondary air systems and is therefore involved in the development of a large number of vehicles. The Pierburg range is unrivalled with over 30 versions.

Water circulating pumps

Flexible, independent helper with high temperature resistance

The Pierburg water circulating pumps are characterised by a low weight and high media and temperature resistance. They are used where cooling or heating functions have to be carried out independently from the engine speed, e.g. auxiliary heating or cooling turbochargers, drive and battery in electric vehicles.

Actuators

Small transformer with a big impact

Whether control valves for camshaft adjustment, electric drive modules for actuating tumble/swirl flaps, stepper motors for idle control or servo motors for adjusting variable intake manifolds – Pierburg actuators can be found wherever adjustments are required.

Know-how transfer

Professional knowledge from the experts

Worldwide training

Direct from the manufacturer

Each year, around 4,500 mechanics and engineers benefit from our training courses and seminars, which we hold on-site in locations across the world or in our training centres in Neuenstadt, Dormagen and Tamm (Germany).

Technical information

From practical experience for practical use

Our Product Information and Service Information publications, technical brochures and posters keep you at the forefront of the latest technological developments.

Technical videos

Professional installation clearly illustrated

Knowledge transfer via video: In our videos, you will find practice-orientated fitting instructions and system explanations relating to our products.

News

Regular information via e-mail

Subscribe online to our free newsletter now and receive regular information about additions to the product range, technical publications and much more.

Social media

Always up to date

Individual information

Especially for our customers

We provide extensive information and services relating to our wide range of services: e.g. personalised sales-promoting materials, sales support, technical support and much more.
