PRODUCT INFORMATION

TURBO SPEED SENSORS FOR UTILITY VEHICLES

Motorservice has added several Pierburg turbo speed sensors to its product portfolio. This means that Motorservice now covers a range of utility vehicle engines from Cummins, Paccar and Volvo. These engines are used in vehicles from manufacturers including Kenworth, Mack, Peterbilt, DAF, Renault and Volvo.

The turbocharger speed sensors detect the exact speed of the compressor impeller or rotor shaft and protect turbochargers from overrevving. Additionally, the control unit is able to regulate the boost pressure more precisely and more quickly based on the recorded speed. This allows optimum use of the engine power depending on the driving situation.
