FUEL DELIVERY MODULES

COMPLETE REPLACEMENT OR SPARE PARTS KIT?

If the fuel delivery module fails, the reason is often the fuel pump itself. Attachments such as the fluid-level sensor, flange cover or swirl pot are usually not affected. Motorservice therefore offers spare parts kits for a range of vehicles.

Spare parts kits allow you to perform repairs in a way which reflects the vehicle's current value and is environmentally sound. They contain the right fuel pump in OE quality plus the required attachments, such as hose clamps, pieces of tubing etc. Motorservice offers special tools in order to make the replacement process simpler and more efficient.

Alongside these spare parts kits, Motorservice is continuing to expand its product range of complete fuel delivery modules even further.

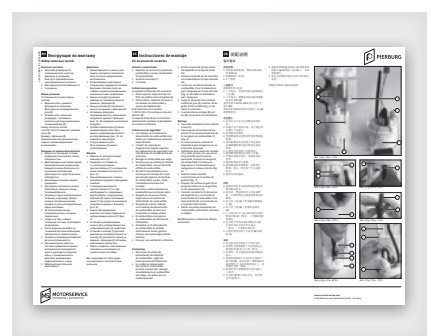

Spare parts set for fuel delivery module

Simple replacement

If required, the necessary auxiliaries are included with the spare parts kits

The replacement is explained in detail in the assembly instructions included with the spare parts kits.

All content including pictures and diagrams is subject to change. For assignment and replacement, refer to the current catalogues or systems based on TecAlliance.
