The fuel pump which has been added to our line of products offers a cost-effective replacement solution for vehicles of the Mercedes M-Class.

The in-tank pump is supplied as a pumping unit with cable adapter and intake filter, preassembled in a holder. Through the holder, the aforementioned competitor's fuel pumps having a different diameter can be replaced. The cable adapter is simply connected to the connector on the vehicle side. In case a replacement becomes necessary, it will not be required to replace the entire pumping module.

In the case of this environment-friendly and cost-effective solution, only the pumping unit within the pumping module is replaced.

The easy replacement is described in detail in the assembly instructions (enclosed with the pump).

The right of changes and deviating pictures is reserved. Assignment and usage, refer to the each case current catalogues, TecDoc CD respectively systems based on TecDoc.
